

Shiprocket Merchant Account Setup

Simple guide for the company director / authorised person

A. Keep these items ready

Company PAN, complete GST certificate, incorporation/registration certificate, company bank details, registered office address, pickup address, company email and an authorised person's mobile number for OTP.

Important: Register the account in the company's existing legal name—not in an employee's personal name.

B. Create and verify the account

1. Visit **www.shiprocket.in** and select **Sign Up for Free**.
2. Choose **I am a Seller**. Enter the company-controlled email and authorised mobile number.
3. Verify the mobile number using OTP and create the password.
4. Enter the company's exact legal name, registered address and pickup/warehouse address.
5. Open **Settings** → **KYC**. Select the correct company type and complete GSTIN OTP verification, or upload Company PAN plus GST/incorporation documents.
6. Add and verify the company bank account. Add the pickup location and wait for KYC approval.

C. Create credentials for the website

1. In the Shiprocket panel, open **Settings** → **API** → **Add New API User**.
2. Create a separate API email and password. Do not share the main Shiprocket login with developers.
3. Note the exact **Pickup Location Name** and its six-digit PIN code.
4. Open the webhook/API settings and add the tracking callback supplied by the technical team. Create a strong webhook token.

Tracking callback: https://OUR_DOMAIN/api/hooks/logistics/events

D. Online payment / Fastrr Checkout

Ask the Shiprocket account manager or support team to enable **Fastrr / Shiprocket Checkout**. Shipping-account activation alone may not activate online payments.

Request the Merchant ID, Public Key, Secret Key, Webhook Secret, Create-Session API URL, payment webhook instructions, and test credentials.

Payment callback: https://OUR_DOMAIN/api/hooks/payment/events

E. Send these details securely to the technical team

1. API-user email and password
2. Pickup location name and PIN
3. Shipping webhook token
4. Fastrr merchant ID and keys
5. Fastrr API URL and integration document
6. Test credentials, if provided

Never send passwords or secret keys through ordinary email or WhatsApp. Use the company-approved password manager or another secure channel.
